

RONNDE RACKING ACCESSORY GUIDE

Complete Components. Flexible Solutions. Reliable Storage Systems.

1. Upright Frame Components

Upright frames are the main vertical supporting structure of pallet racking systems. Components include upright columns, bracing, base plates and bolts. Different heights and load capacities can be configured according to warehouse requirements.

2. Beam Components

Beams connect upright frames and support pallets. Available options include step beams, box beams and customized beam profiles for different loading requirements.

3. Pallet Support Accessories

Pallet supports improve safety and stability during storage. Common accessories include pallet support bars, wire decking, steel panels and additional load supports.

4. Safety Protection Accessories

Safety accessories help protect racking structures and improve warehouse operation safety. Products include column protectors, side barriers and safety signs.

5. Storage Level Accessories

Storage level accessories are designed for different cargo types and applications. Options include mesh panels, dividers and special storage attachments.

6. Rack Extension & Expansion Accessories

Additional components allow customers to expand or modify existing warehouse storage systems. Extensions include extra bays, additional levels, replacement beams and spare structural parts.

7. Recommended Spare Parts

For long-term operation, we recommend keeping commonly used spare parts including beams, upright frames, base plates, safety pins and connection accessories.

8. Customized Accessories Support

RONNDE provides customized accessory solutions according to rack type, cargo requirements, warehouse conditions and operational needs.
